Presentation Outline

- Sentinel Events
- Semantics & Ontologies
- Q. What is Linked Data?
- Australian Government
- Infrastructure Development Process inc. Large IT Systems
- [structure.gov.au](#) and The Finance Knowledge Graph
- Other .gov.au examples
- AGLDWG
- Upcoming AGLDWG Presentations
- Questions / Discussion

Sentinel Events

- First Australian Sentinel Warning recorded by the British
- Sentinel events in Australian healthcare
- Australian Healthcare & Linked Data

First Australian Sentinel Warning recorded by the British

A sketch of two Indigenous men waving spears at Captain Cook's arriving ship. Source: "[James Cook: founder of 'modern Australia', or the embodiment of dispossession?](#)" by Mark McKenna published 17 March 2018, Sydney Morning Herald.

Sun 29 Apr 1770, [Kurnell, Botany Bay, NSW](#)

Local men made threatening gestures with spears and yelled the words "**warra warra wai**".

The British *interpreted* as "Go Away!" Source. Journal of Sydney Parkinson, a young artist employed on the ship Endeavour.

Actual Meaning: When the Dharawal men ashore saw the Endeavour coming, they thought it was low-lying cloud because all they could see was whiteness. They had no experience of ships, and in Dharawal culture, low-lying cloud means the spirits of the dead have returned. So when the two men opposed the landing, they were warning others, and protecting the country in a spiritual way, from ghosts.

**Australian Sentinel Events List
(version 2)**
Specifications

Sentinel Events in Australian Healthcare

Ten sentinel events are specified under four categories including:

- Surgical or other procedures,
- Mental health,
- Medication, and
- Care management.

Home > Initiatives and programs > Interoperability > Council for Connected Care

Council for Connected Care

Providing strategic advice on interoperability and supporting the implementation of the National Healthcare Interoperability Plan.

Interoperability

Interoperability enables a connected healthcare system which shares health information securely, safely and without any special effort from the people and organisations involved.

Standards

The Digital Health Standards program focuses on developing a dynamic, comprehensive and collaborative digital health standards environment in Australia to enable a greater level of connected care for all Australians.

Semantics & Ontologies

- Concept of Event
- Ontological Design
- Things in the Real World
- Invalid Things
- A Little Semantics Goes a Long Way
- A Little Provenance Goes a Long Way

Concept of Event

Event is a concept defined in numerous vocabularies, Top-Level (Upper) Ontologies, and Mid-level Ontologies including:

Dublin Core:

<http://purl.org/dc/dcmitype/Event>

Basic Formal Ontology (BFO):

http://purl.obolibrary.org/obo/BFO_0000015

[Ontology of Adverse Events](#)

[Ontology of Vaccine Adverse Events](#)

[Ontology of Cardiovascular Drug Adverse Events](#)

[Ontology of Drug Adverse Events](#)

[Ontology of Drug Neuropathy Adverse Events](#)

Industrial Data Ontology (IDO):

<http://rds.posccaezar.org/ontology/lis14/rdl/Event>

schema.org:

<https://schema.org/Event>

Ontological Design

Ontological design is fundamentally about knowledge representation. That is, formally describing relationships between things.

The process of ontological design is basically getting a consensus on how to view the world so they can build systems that work together.

Ontologies encode human knowledge.
Encode = Convert into a coded form.
IT machines need coded forms.

Things in the Real World

Apples & Oranges

*See upcoming (Thu 2Apr2026) AGLDWG
presentation by Harley Thomas
<https://www.trustprovenance.com/>*

These are real things we know.

*Q1. In our IT systems, how are
these things modelled?*

*Q2. What trust do we have in these
things before we use or consume
them?*

Q. Are these valid things in the real world?

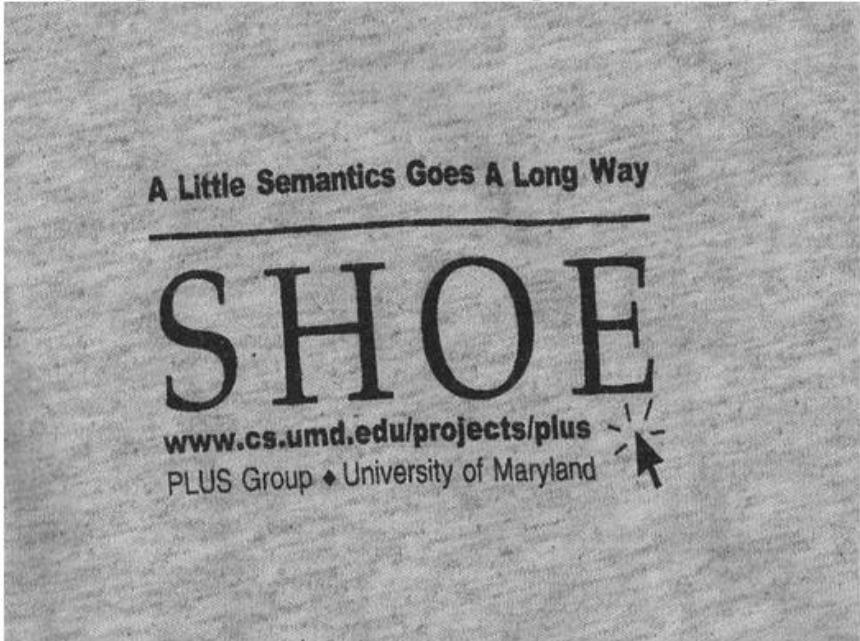

Ontologies ensure model validity.

A Little Semantics Goes a Long Way

It is a bit humbling to me as a scientist that my most quoted line ever does not come from a paper I have written. This line is "A little semantics goes a long way" and it has become one of the slogan's of the Semantic Web movement. Here's a few different ways that this term has been used and come around -- so I can help set the record straight.

- My original use of the term was on the group shirts we made for the [SHOE project](#) back in '97 or '98. My then student, [Sean Luke](#) designed a very nice logo for the shirt, but we needed a catch phrase. I suggested this phrase, as it captured the idea that SHOE was less expressive than most KR languages, but that this was by design as we were proposing AI for the Web. We ended up using the phrase on the shirts -- so the phrase definitely predates the Semantic Web effort.

Source: Jeff Heflin

<https://www.cs.rpi.edu/~hendler/LittleSemanticsWeb.html>

Note: A little is not none.

- When I got to DARPA (1999), I started pushing that for agents on the web we needed a KR language that was very scalable and easily learned by non-AI experts. Since I was using SHOE as a demonstrator within the government, I kept wearing the T-shirt, and I also used the "A little semantics goes a long way" phrase in many of my talks. While I was at DARPA I started the

A Little Provenance Goes a Long Way

1

PROV is a rich vocabulary that was designed to tackle a variety of use cases. The Provenance Working Group worked really hard to design PROV to facilitate its adoption. In our book, Paul and I provide many recipes to design, deploy, and use provenance in the context of a complex data journalism scenario.

Source: Paul Groth and Luc Moreau

<https://lucmoreau.wordpress.com/2013/10/11/a-little-provenance-goes-a-long-way/>

Once again: A little is not none.

Q. What is Linked Data?

- Some Events on Interest
- World Wide Web (WWW)
- Two Concerns with Linked Data
- Value Proposition with Linked Data

In two centuries, the world population has grown 7 billion

Estimated global population from 10,000 BCE to 2021

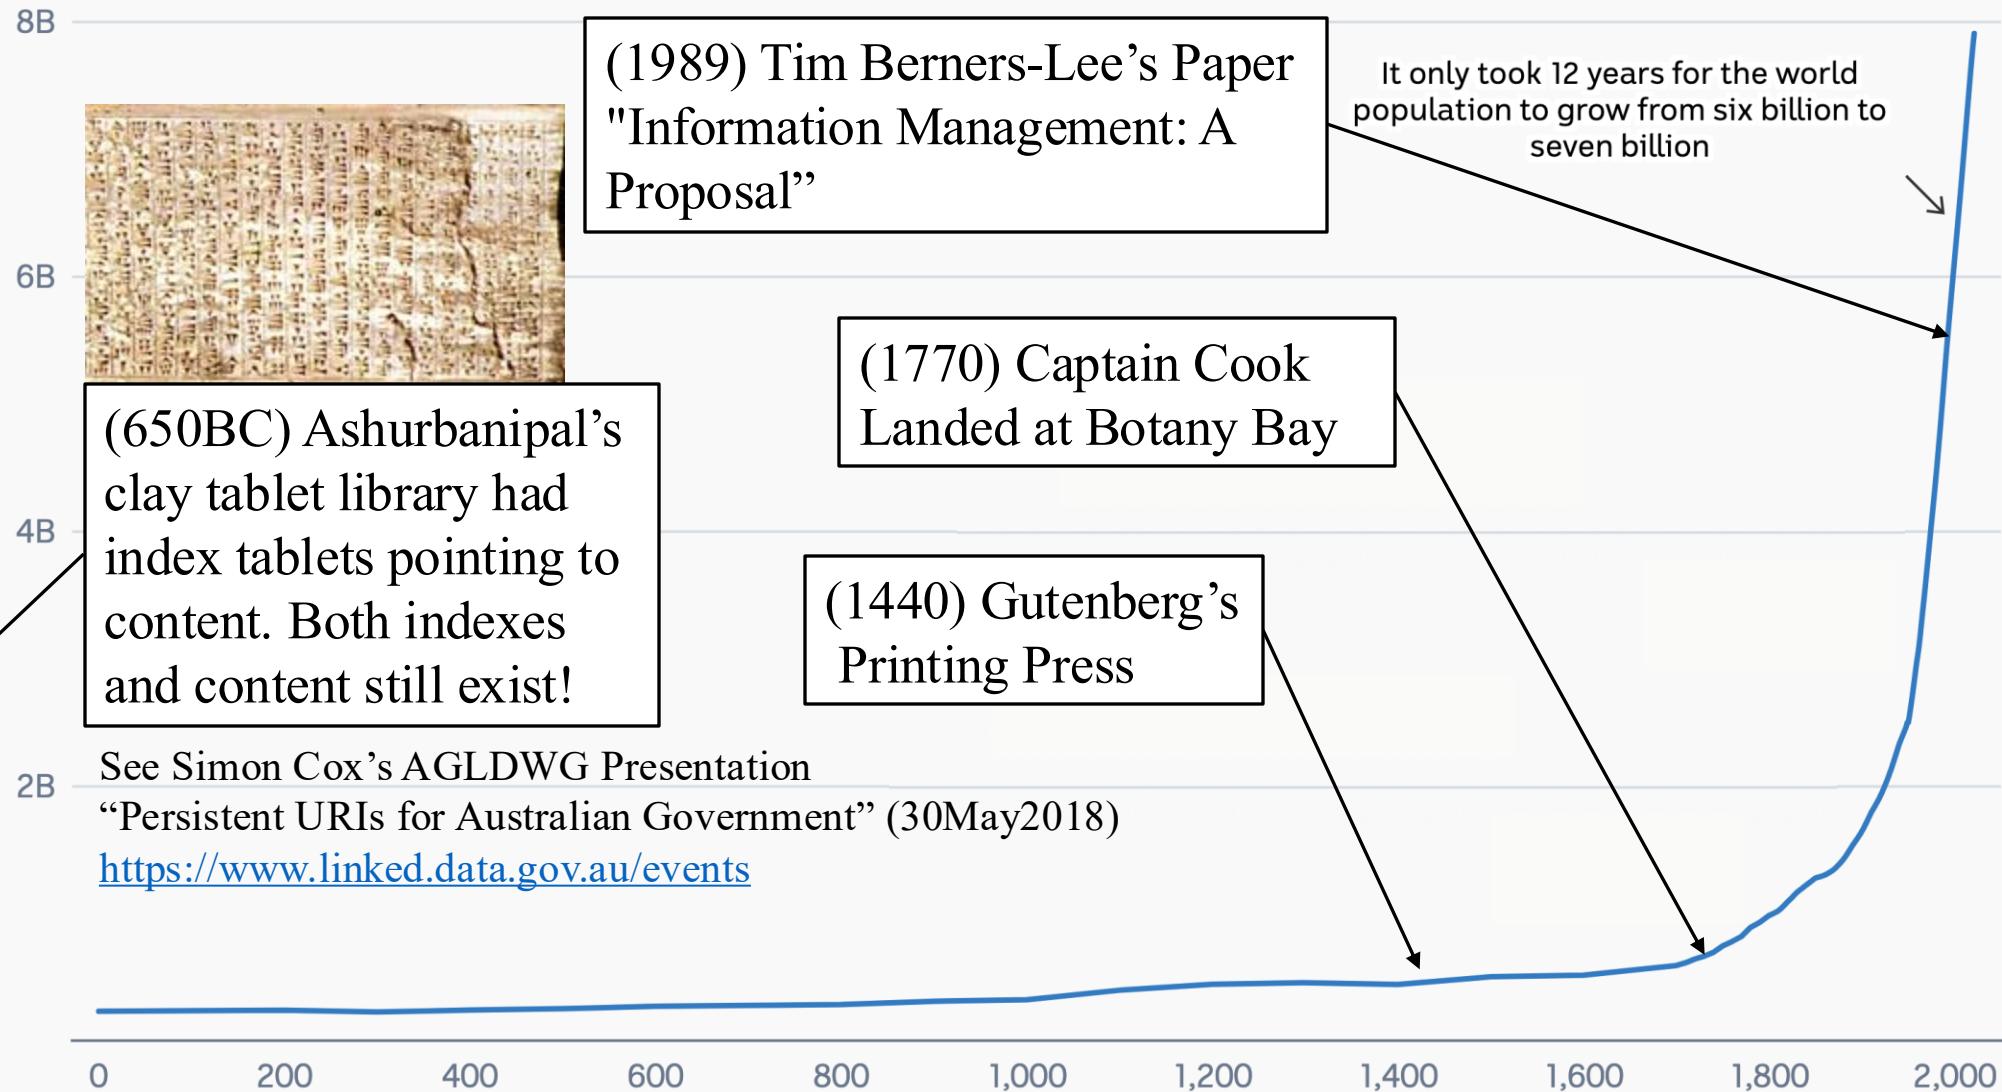

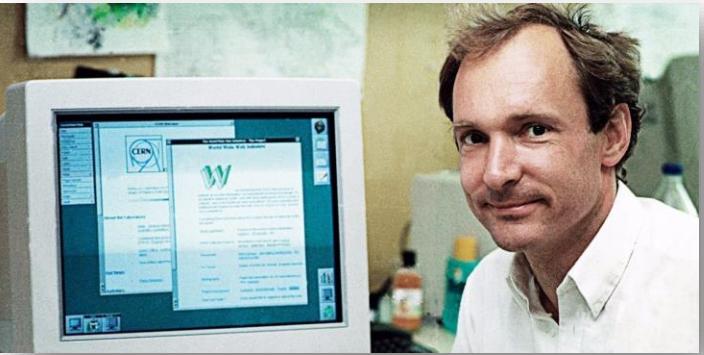

Chart: ABC NEWS / Source: Compiled by Our World In Data from Gapminder and UN World Population Prospect data

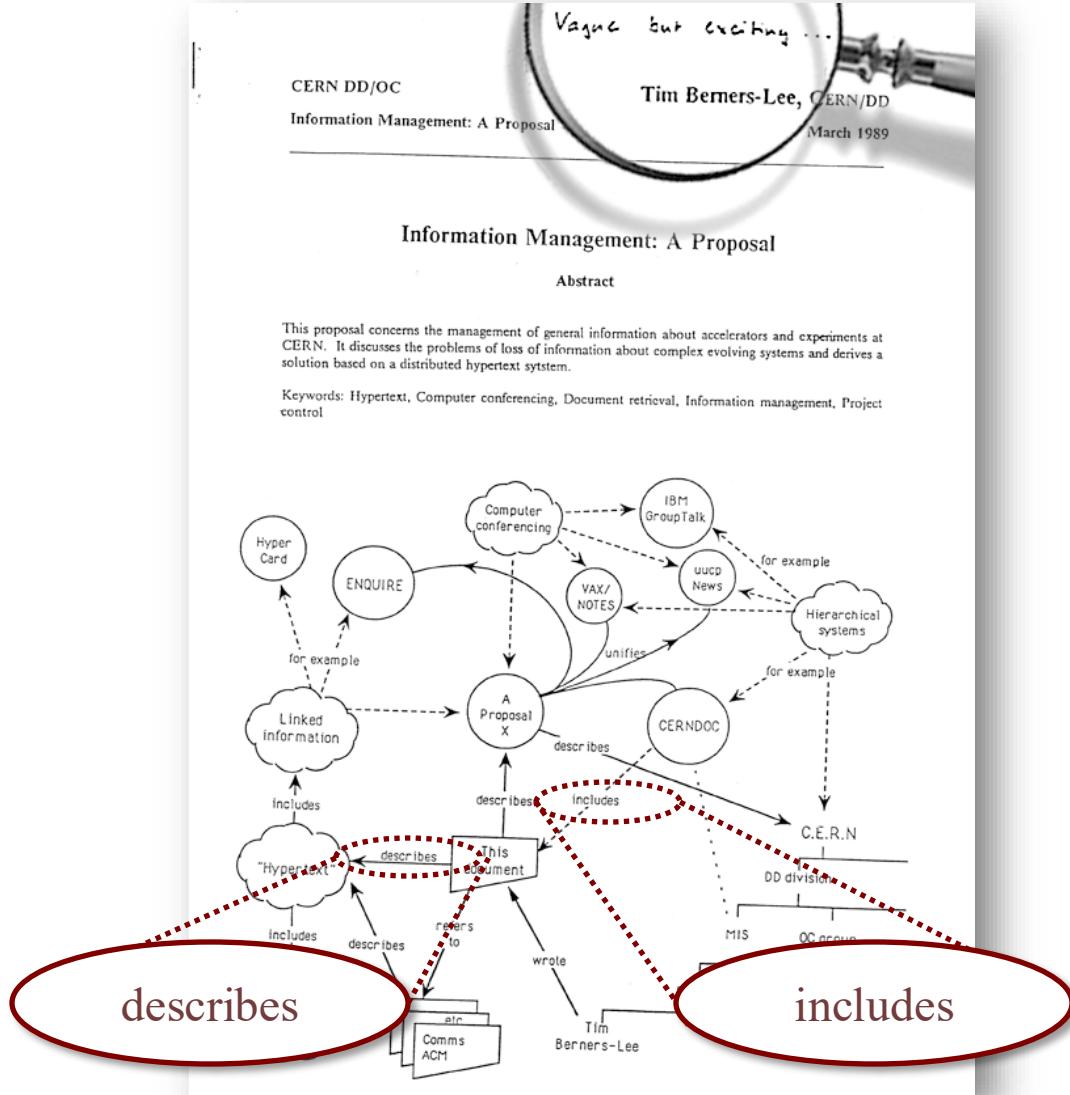

[Source](#)

WORLD WIDE WEB (WWW)

Sir Tim Berners-Lee's
original Proposal of the
World Wide Web in 1989
included “link relations” ...

Slide Source: AGLDWG Presentation by Armin Haller
“[Open Data - Link It!](#)” (15Aug2017)
<https://www.linked.data.gov.au/events>

... but the WWW used only one type of link relation (hyperlinks) for years ...

Slide Source: AGLDWG Presentation by Armin Haller “[Open Data - Link It!](#)” (15Aug2017)
<https://www.linked.data.gov.au/events>

... until LINKED DATA

- Sir Tim Berners-Lee (again) published a design-note in 2006 on Linked Data

Machine-readable data now
Machine-understandable data

Slide Source: AGLDWG Presentation by Armin Haller “[Open Data - Link It!](#)” (15Aug2017)
<https://www.linked.data.gov.au/events>

Two Concerns with Linked Data

Concern 1: It's too technical

Yes, it's technical, but it has very solid foundations & clear principles.

Solution: Use your technical experts & avoid proprietary solutions which result in vendor lock-in.

Concern 2: Linked Data = Open Data which erodes privacy.

Not true as Access controls & Permissions are integrated with LD.

Value Proposition with Linked Data

1. Enables single source of truth.
2. Substantially reduces cost and risk in large developments by:
 - creating a more comprehensive and reliable evidence base, which leads to:
 - more effective decision-making,
 - improved system performance insights,
 - a higher degree of accuracy in analysis, and
 - more predictable outcomes.
3. Has potential to be a catalyst for National productivity uplift.

Australian Government

- Three levels of Australia's Government
- Government & Money

All three levels of Australia's Government are involved

1. Federal

2. State & Territory

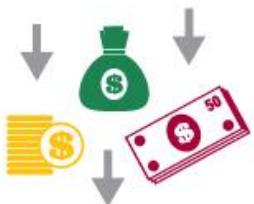

3. Local Councils,
Shires, & Municipalities

Government & Money

The **FEDERAL GOVERNMENT**

raises money through taxing incomes, spending and businesses.

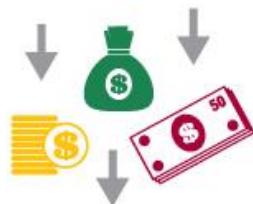

FEDERAL MATTERS SUCH AS

- MEDICARE
- DEFENCE
- IMMIGRATION
- FOREIGN POLICY

STATE/TERRITORY GOVERNMENTS

receive more than half their money from the federal government and also collect taxes.

STATE MATTERS SUCH AS

- ROADS
- HOUSING
- PRISONS
- PUBLIC TRANSPORT
- POLICE and AMBULANCE SERVICES

LOCAL COUNCILS

collect taxes (rates) from all local property owners and receives money from the federal and state governments.

LOCAL MATTERS SUCH AS

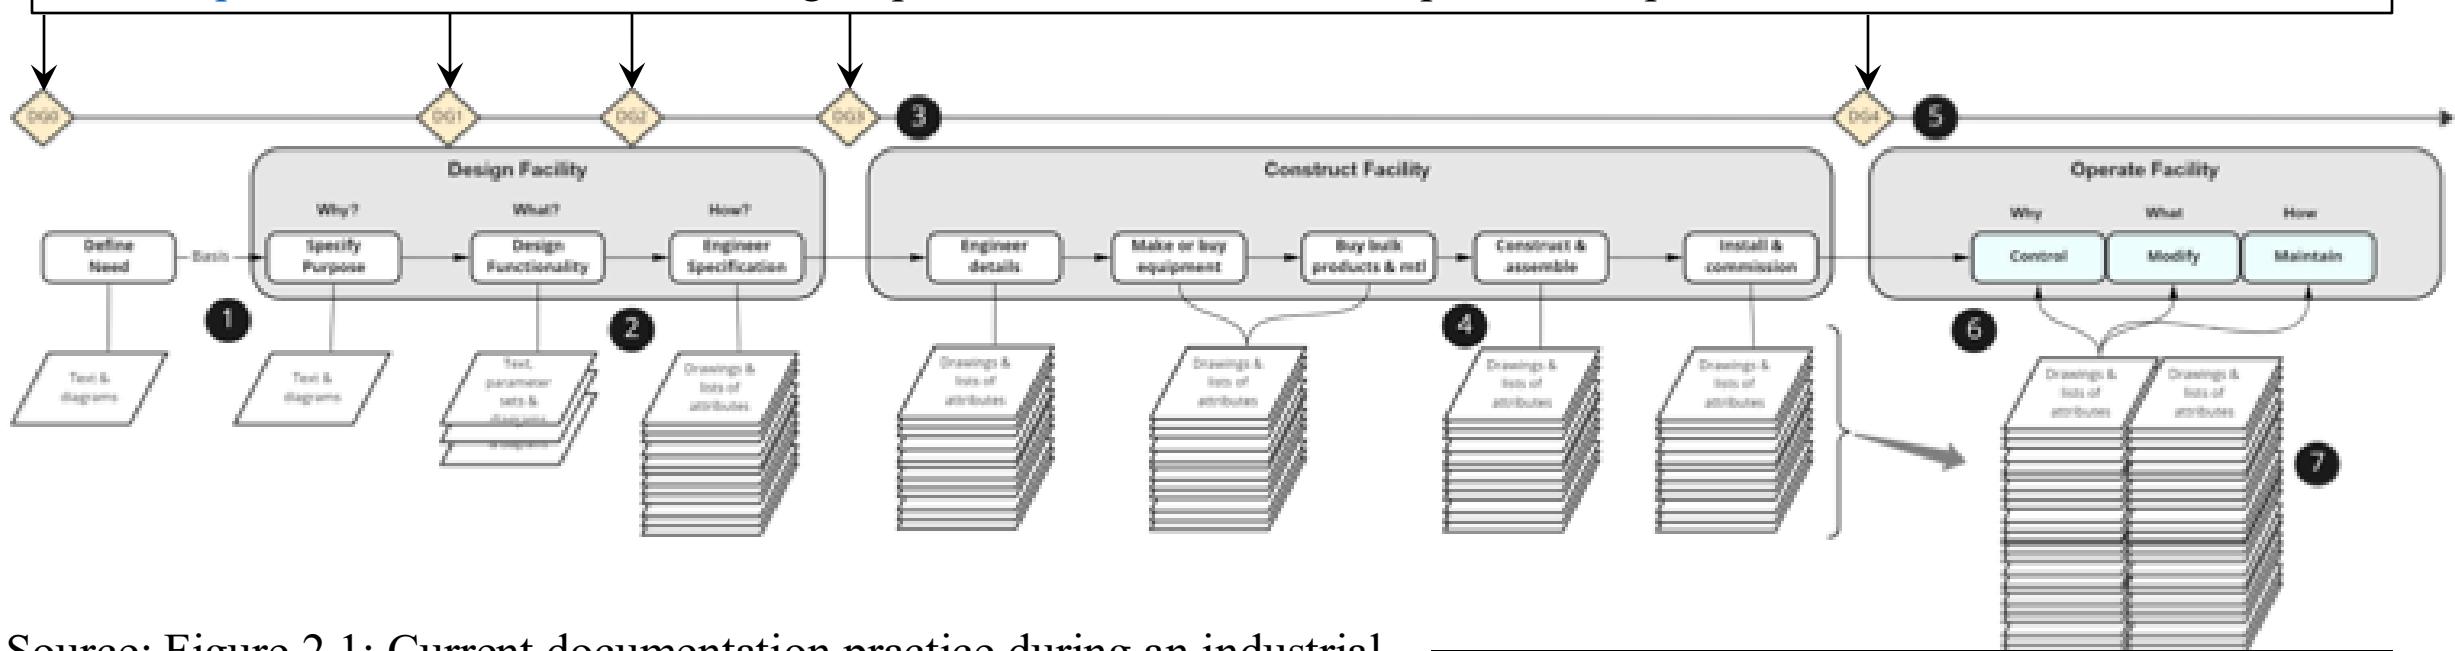

- TOWN PLANNING
- SEWERAGE
- LOCAL ROADS
- RUBBISH COLLECTION

Infrastructure Development Process inc. Large IT Systems

- Infrastructure Development Process
- Transition from:
 - Document Based Development, to
 - Information Based Development
- [structure.gov.au](#) and The Finance Knowledge Graph

Infrastructure Development Process

To “strengthen governance and assurance practices and to assist non-corporate Commonwealth entities to successfully deliver major projects and programs”, our Department of Finance defines these Decision Gates (DG) in Australia's Gateway Reviews Process <https://www.finance.gov.au/government/assurance-reviews-and-risk-assessment/gateway-reviews-process> This is a standard toll-gate process also known as two-pass, multi-pass, etc.

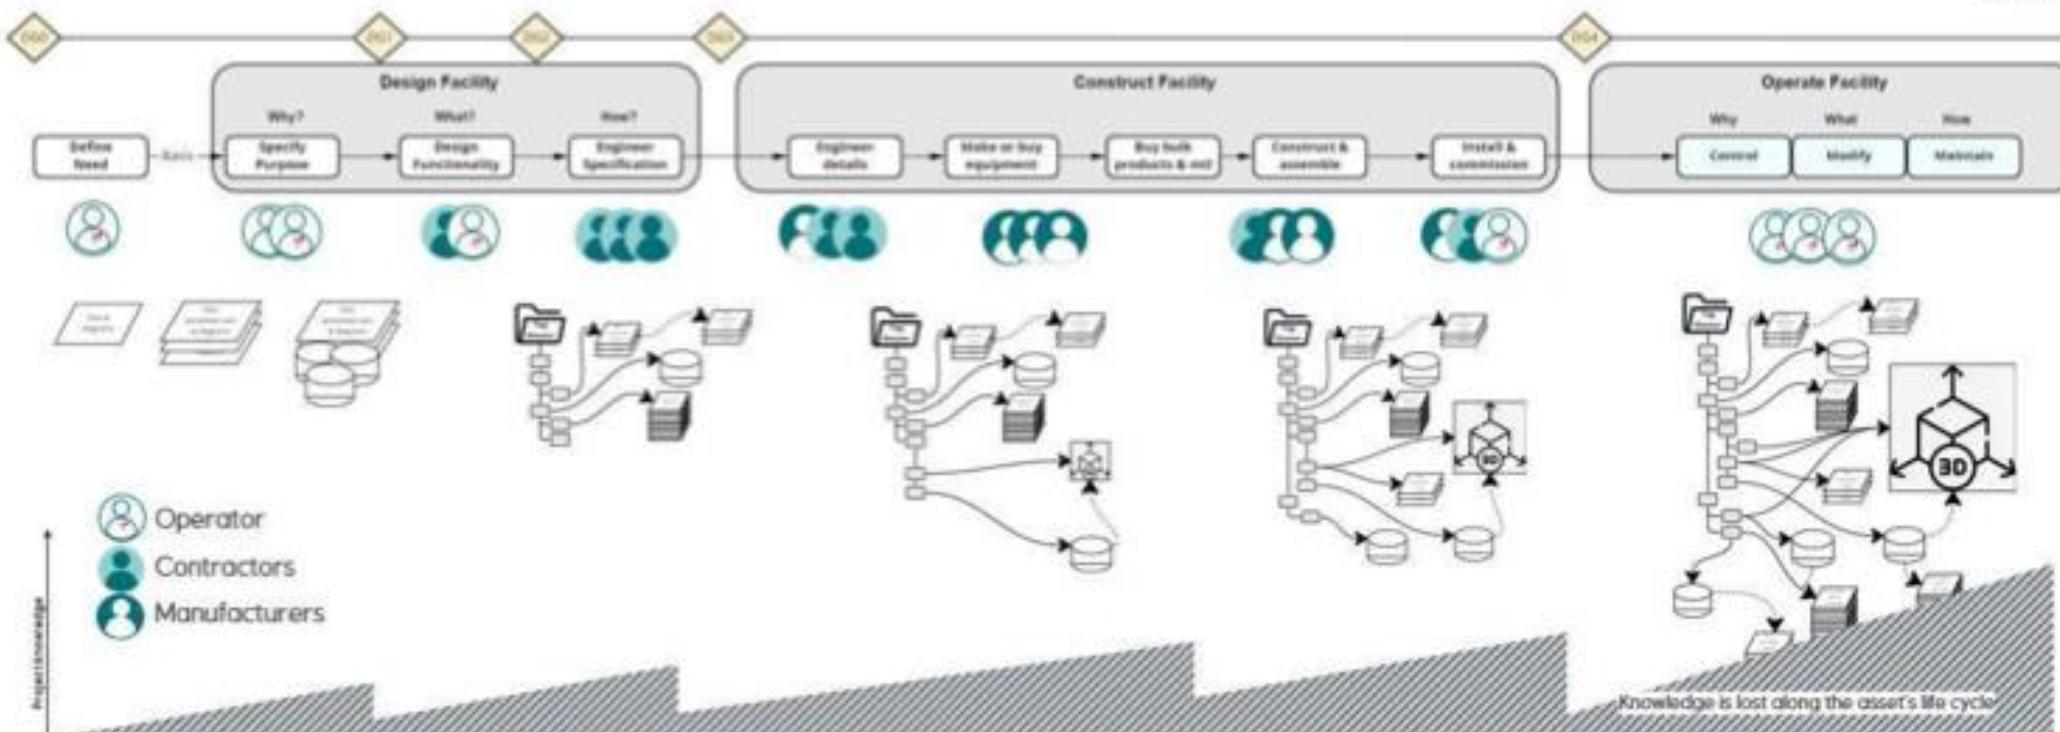

Source: Figure 2.1: Current documentation practice during an industrial investment and development project. Information Modelling Framework (IMF) Manual v.0.3.0 (29May2024) <https://www.imfid.org/#orgd34ab30>

Creating a common understanding
of what things are

From documents-based approach

Consequences:

Automation of manual procedures is difficult

Labour-intensive document handling

Risk of safety and quality breaches

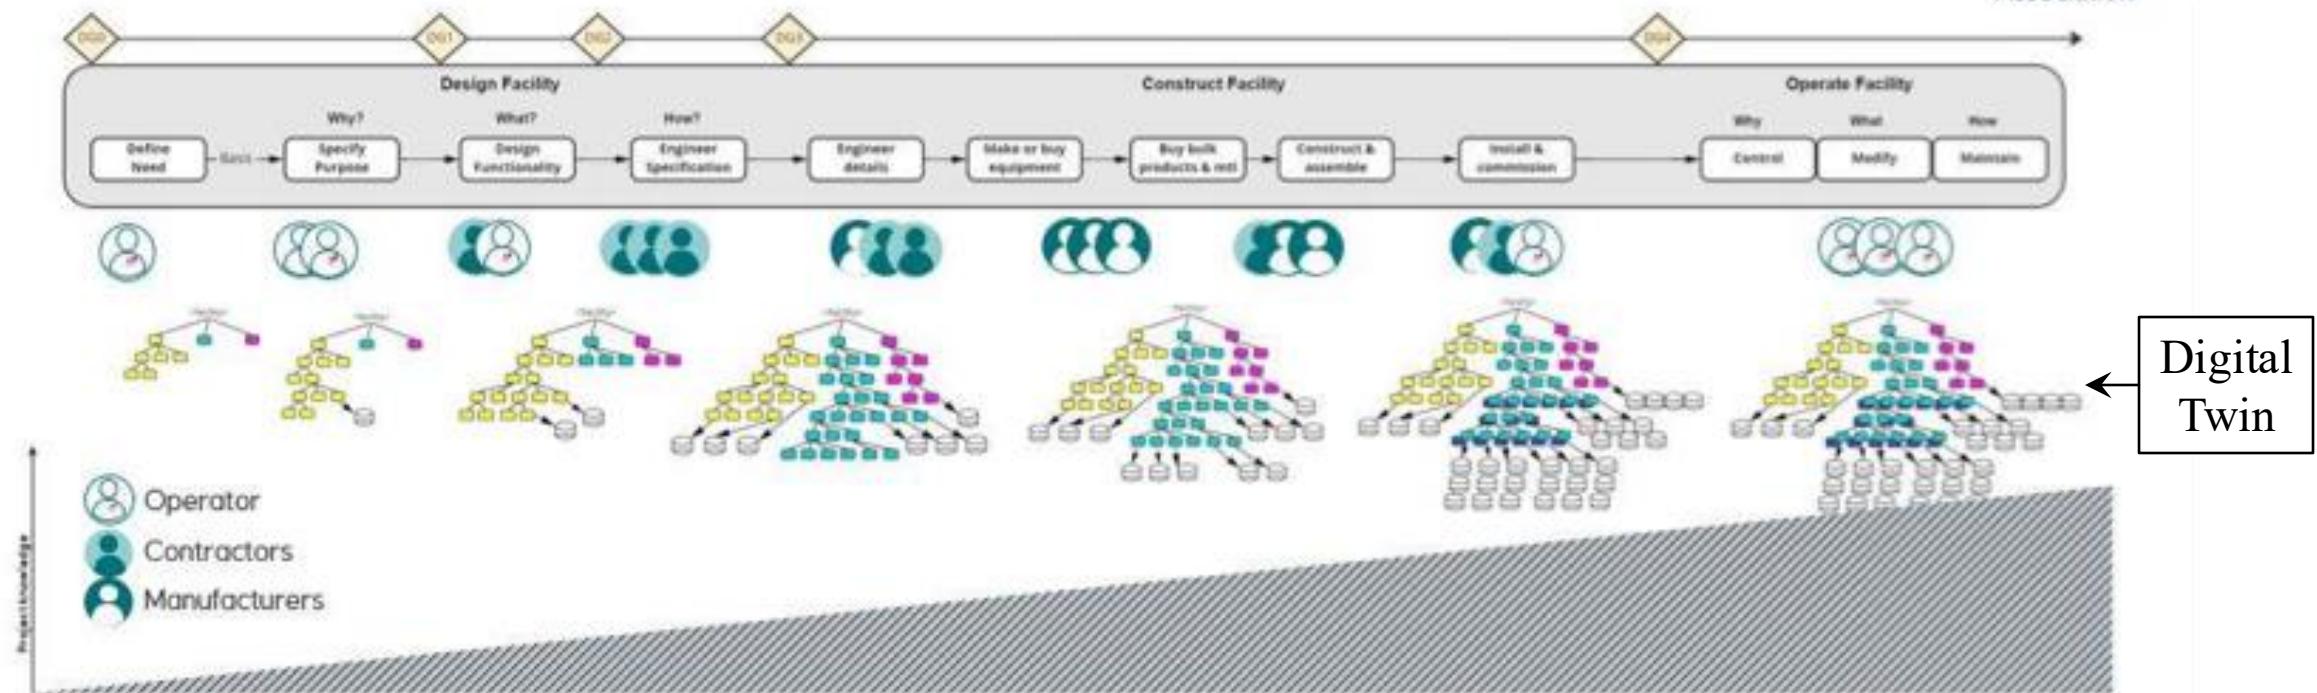

Lost business opportunities

Source: Magnus Oanes Knædal, Equinor

12

Source: Melinda Hodkiewicz "On-shoring engineering design – enabling cost effective design and quality control checks – at scale" (May 2024)
<https://www.fenex.org.au/wp-content/uploads/2024/06/Hodkiewicz-Melinda-On-Shoring-Engineering-Design-Enabling-Cost-Effective-Design-Quality-Control-Checks-At-Scale.pdf#page=12>

...to information model-based approach

Added values:

 Become more effective by hindering loss of information during handovers

Automation of manual procedures possible using machine integrable information models

Reduce cost and time spent by the possibility of building in smartness

Improved safety and quality by better control of technical information

New business opportunities by combining information in new ways

Source: Magnus Oanes Knædal, Equinor

Communities

IRI <https://pid.geoscience.gov.au/def/voc/ga/HazardAndRisk/communities>  

Type Concept 

definition 

A community, like a family, can contribute to a person's wellbeing e.g. support and care for individuals or by helping give a sense of identity and security. Like 'family', a definition of 'community' can vary greatly. A community can be based on:

location

where you live or work

those who you have immediate family ties with (by blood and/or marriage)

shared values

traditions

interests

lifestyles

religious groups

school communities

The boundary of a community extends beyond a physical location.

AUSTRALIAN GOVERNMENT LINKED DATA WORKING GROUP

Community of Commonwealth Government experts and champions, with invited non-voting participation of individuals, corporations and other entities.

- Established in August 2012, with strong growth in membership since the Government released the outcomes of an inquiry on [Data Availability and Use in the Australian Government](#).
- No official Government mandate or related legislation, but a community of practice that promotes and represents a series of federal Government entities who seek to implement and use Linked Data technologies for the betterment of Australian Government data sharing.
- Several members have signed an MoU to support the use and persistence of [linked.data.gov.au](#) URLs.
